The magnitudes and the character of the distribution
of stresses in turbine runners exposed to the action of
centrifugal forces, were determined by laboratory
model tests. Results showed that maximum stresses
appear in the inlet and exit edges of the blade and the
skirt. The stresses in the "curve" of the blade and in
the crown are insignificant. (Author)

Belikhis, G. A.

A NEW METHOD FOR DECONTAMINATING
TETRAETHYLLEAD. [1963] 5p.

Order from CTS or SLA [1.1]

63-14391

Trans. of Gigiena i Sanit[ariya] (USSR) 1947,
v. 12, no. 11, p. 51-52.

DESCRIPTORS: *Lead compounds, *Ethyl radicals,
Fuel additives, *Decontamination, Water, Organic
solvents, Kerosene, Decomposition, Acids, Halogen
compounds, Buildings, Storage, Soaps, *Fuel
contamination.

Broad application of the best of the known antilack
agents - tetraethyllead - causes a problem of de-
contamination in the production of the ethyl liquids
by its mixing with fuel and by use of the leaded fuel.
For the decontamination of buildings, equipment and
storage places (landing places) there is presented a
series of methods. (Author)
